#### PLANTING INSTRUCTIONS

Plant tulips in October is possible. --

They may be planted anytime from September 1st until the ground freezes, but the October planting gives the bulb a chance to make roots that anchor it against a possible frost heave.

Plant bulbs six or more inches deep and at least six inches apart each way.

Use bone meal for fertilizer, mixing it in the bottom soil. Do not use fresh manure of any kind.

Pick the blossoms before they drop. Fallen petals in the axils of the foliage may cause the fire disease, the only disease known to attack tulips.

If at all possible, plant tulips where there is little danger from field mice.
